Maximizing Audit Assurance with Artificial Intelligence

Faster, More Complete Audits with Greater Assurance

What is the MindBridge Ai Auditor™

The MindBridge Ai Auditor is an analytics software platform for accounting professionals that uses artificial intelligence to uncover material errors in data. Our platform makes the audit process more efficient and complete, resulting in lower risk exposure and providing end-clients with increased assurance that exceeds regulatory and industry standards.

Key Features

- Smart data import
- Out of the box integration with leading ERP systems
- Advanced AI and Machine Learning algorithms
- 20+ standard financial reports and ratios
- Risk-based scoring
- Intuitive user interface
- Intelligent transaction sampling
- Automatic service updates

MindBridge™
Ai Auditor™

Key Benefits

Higher Audit Assurance

The MindBridge Ai Auditor analyzes all of the transactions using a hybrid of artificial intelligence, Machine Learning, statistical models and rule-based tests offering higher assurance. This has been proven to be at least 10x more effective than current approaches.

Operational Efficiency

The smart data ingestion functionality of the MindBridge Ai Auditor automates the loading of financial data. A 'risk score' is calculated and associated for each of the transactions, permitting the auditor to easily and quickly prioritize items that warrant further investigation.

Deliver Higher Value Services

Removing labor-intensive, repetitive tasks from the audit process enables you to provide results rapidly and focus on delivering higher-value services to your clients.

Getting Started is Easy

Flexible Implementation

Ai Auditor™ is available in both a secure cloud offering or an on-premise deployment to meet your unique requirements.
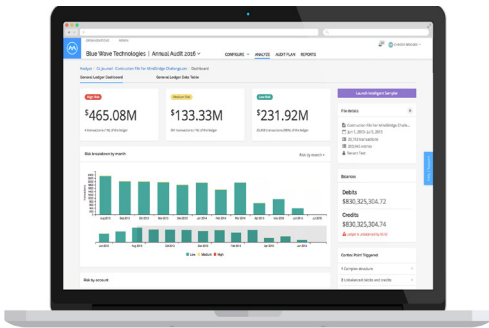

Advanced Task Visualization

Our advanced task visualization and management system promotes collaboration. You can assign the right tasks of the audit to the right audit team members at the right time.

Fast and Scalable Data Science Insights

Ai Auditor handles general ledgers of all sizes, from files exported from standard accounting packages to large files from the leading ERP systems. This functionality coupled with our data ingestion support service can help you get started in no time.

Easy Exports

You can easily export our analytical results into standardized audit file management solutions and provide your clients with a more compelling audit report providing a richer end-customer experience.

Quick Team Onboarding

With our easy and intuitive interface design, your audit team can ramp up more quickly, making onboarding a snap with minimal effort and time.

Customer Testimonial

"The MindBridge Ai Auditor enables our team to pinpoint unusual transactions and enhances the thoroughness and precision of our analytics. Investigations that have historically involved months of combing through millions of transaction samples are now much more comprehensive—yet more narrowly focused—and can be concentrated in just hours."
